Palomar Engineers Short History

- Founded in 1965 by Jack Althouse, K6NY
- Reorganized in 2013 as RFI Solutions & Antenna Company
- **Objective:** Provide products that make radio communication more effective & enjoyable
- **Product Line**
 - Antenna Systems (OCF, End Fed, Loop, Terminated)
 - Baluns, Ununs, Feedline Chokes & Coax Noise Filters
 - RFI Solution Kits for Hams, Household, Marine/RV
 - Ferrite Core Products – Ring, Snap On, Slip On
 - Kurt Sterba Books/Free Downloads
- **Distribution:** Ham Radio Outlet, Direct, eBay
- **Markets:** Amateur, Consumer, Commercial, and Military

End Fed Workshop Topics

- Short overview of antenna feed point options
- Dipole, OCF, Zepp, overview
- Popular End Fed Antennas
 - Resonant End Fed Half Wave
 - Non-Resonant End Fed Long Wire
 - Resonant End Fed OCF (EFOCF)
- Typical Configurations that work all the time
- How to choose an End Fed Antenna that fits your needs (bands, space, power)
- Feed Line Chokes, Coax Noise Filters, Antenna Switches
- Q & A

Thinking cap time.....

Antenna Feed Options

CENTER FED

OFF-CENTER FED

END FED

Resonant Dipole Examples

66' Wire = 1 Band
Low Install (<20')

Center Fed Single Band Dipole

$Z = 25\text{-}120$ ohms depending on wave length height above ground

For very low dipoles center point Z is < 50 ohms, so a trick is to feed slightly off center (one side longer) to raise the Z and lower the SWR (see above)

Total length = $468/F$ (MHz)

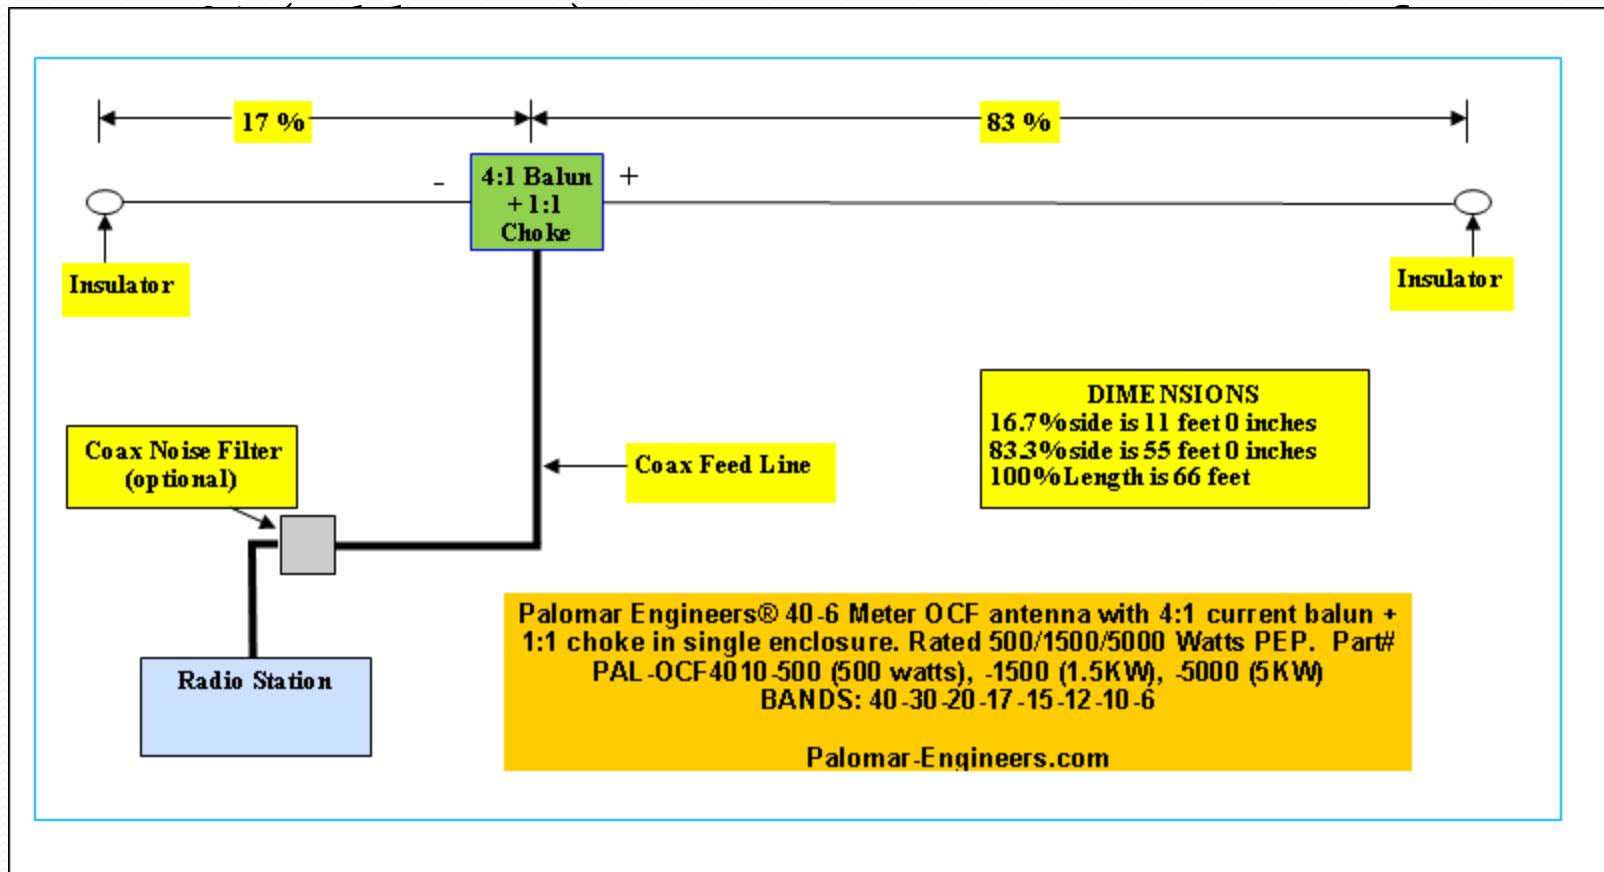

Goal: Show how to optimize use of 66' wire

Palomar OCF

Palomar OCF Layout – 40-6 meters

– 66 Ft (55' + 11')

66' Wire = 8 Bands
Install > 20'

We have OCF dipoles that cover 80-6, 40-6 or 20-6 meters

OCF SWR

OCF SWR (40-6 Meters)

66' Wire = 8 Bands

Very Popular > 1000 in use

End Fed Antennas

End Fed Antenna Types

- End Fed Zepp (aka J-Pole)
 - End Fed Half Wave
- Non-Resonate End Fed Long Wire
- Resonant End Fed OCF (EFOCF)

End Fed Half Wave (Zepp)

- Pros
 - Low loss
- Cons
 - Single band, odd harmonic w/o antenna tuner
 - High and long (66' & 33' feedline for 40M)
 - Needs feed line choke at coax feed point to prevent coax braid from radiating

66' Wire = 1 Band

#1 End Fed Half Wave

Palomar EFHW Product

49:1 Unun
50Ω:2450Ω
Unun

Feed line
choke & wire

PALOMAR
—ENGINEERS®—

**Bullet End Fed Half Wave
Antenna System
66 Ft Wire (40-10M) +
Snap On Feed Line Choke
300 W SSB/150 W Digital**

Part#: PAL-EFHW4010-300

Configuration

Palomar EFHW Configuration

Bullet™ End Fed Half Wave Wire Antenna Configuration

Max antenna current near center of antenna

Coax feed line length > 25 feet

Feed Line Choke helps keep RF out of radio during transmit

© Palomar Engineers® 2016-2023

Palomar-Engineers.com

Other Possible Configurations

Palomar EFHW-4010 (40,20,15,10)

66' Wire = 4 Band

This configuration typical of most competing brands – 66 feet, only 4 bands! 49:1 high impedance unun, voltage fed with high voltage caution required! Note: 49:1 ununs have limited bandwidth so no WARC or 6 meters!

Caution!!!

Caution: EFHW High Voltages

CU-49, CU-64 Unun for End Fed Antennas			
Output Terminal Voltage Calcs $E = \text{SQRT}(P \cdot R)$			
RATIO:	49:1	64:1	
Watts Input	Volts (r=2450 ohms)	Volts (r=3200 ohms)	
10	157	179	
20	221	253	
30	271	310	
40	313	358	
50	350	400	
100	495	566	
200	700	800	
300	857	980	
400	990	1131	
500	1107	1265	
600	1212	1386	
700	1310	1497	
800	1400	1600	
900	1485	1697	
1000	1565	1789	
1500	1917	2191	
2000	2214	2530	

**Keep feed point
away from kids, pets
& people due to high
voltage which may
kill or start a fire
under the right
conditions!**

DISCONTINUED

**This antenna has been
replaced with the safer,
shorter and far superior
End Fed OCF Antenna**

#2 - Non Resonant EFLW

Palomar Bullet-71 Antenna

9:1

PALOMAR ENGINEERS®

500 Watts PEP
Bullet™ End Fed Antenna System
71 Ft Antenna Wire (80-6M) +
BULLET-9U-500 Unun +
Snap On Feed Line Choke
Preassembled & Tested
Part#: BAS-71-500

PALOMAR ENGINEERS®

1500 Watts PEP
Bullet™ End Fed Antenna System
71 Ft Antenna Wire (80-6M) +
SBULLET-9U-1500 Unun +
Snap On Feed Line Choke
Preassembled & Tested
Part#: BAS-71-1500

Setup

Typical Non-Resonant End Fed Antenna Setup (like OCF)

Resonant outside ham bands

Bullet™ End Fed Long Wire Antenna Configuration

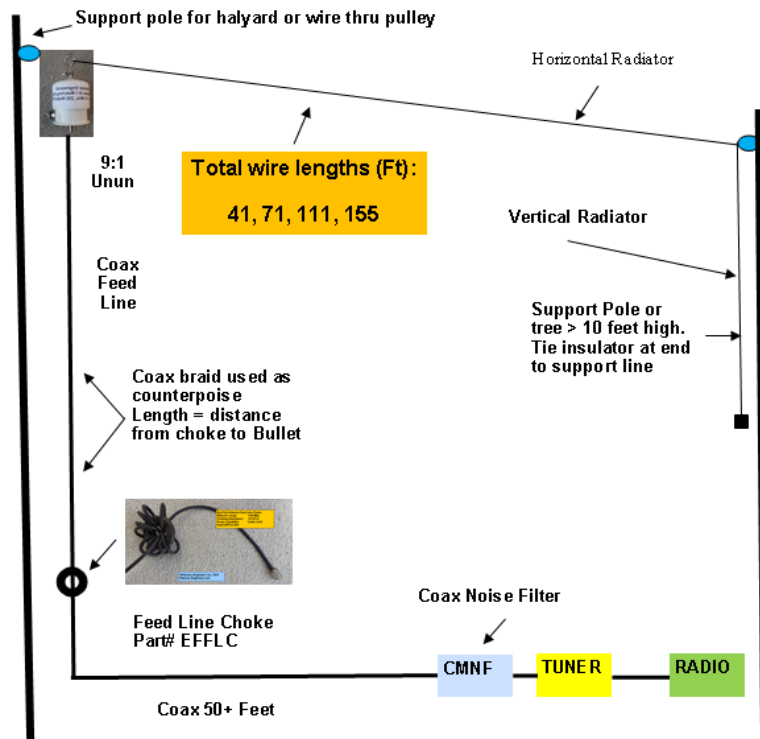

Max antenna current near Bullet matching unit.

Coax feed line length > 50 feet

Feed Line Choke required since counterpoise radiates

© Palomar Engineers® 2016-2022

Palomar-Engineers.com

Wire = 71'
Choke at 42'
Length = 113'
F = 4.14 MHz

Can work 80, 60 with tuner

Coax braid radiates (down to choke) like wire

Bullet – 71' most popular length, 80-6 meters with tuner, over 5000 in use – at HRO or direct

SWR Factors

Bullet-71'- SWR

71' Wire = 10 Bands
Choke on coax at 42'

All bands < 3:1, most under 2:1, tuner needed on 80

#3 - Resonant EF OCF

Bullet-4006 – OCF End Fed

Bullet OCF End Fed Antenna System
40-30-20-17-15-12-10-6 Meters
Wire: 55 FT, Choke at 12 FT
100 Watts PEP/100 Watts Digital

Part# BULLET-4006-100

Bullet OCF End Fed Antenna System
40-30-20-17-15-12-10-6 Meters
Wire: 55 FT, Choke at 12 FT
500 Watts PEP/300 Watts Digital

Part# BULLET-4006-500

Bullet OCF End Fed Antenna System
40-30-20-17-15-12-10-6 Meters
Wire: 55 FT, Choke at 12 FT
1500 Watts PEP/750 Watts Digital

Part# BULLET-4006-1500

55' Wire, Choke on coax at 12'

Also Available:

Bullet-2006: 20-17-15-12-10-6, Wire length = 25', choke at 7'

Bullet-8006: 80-40-30-20-17-15-12-11-10-6, Wire = 95', choke at 40'

Config →

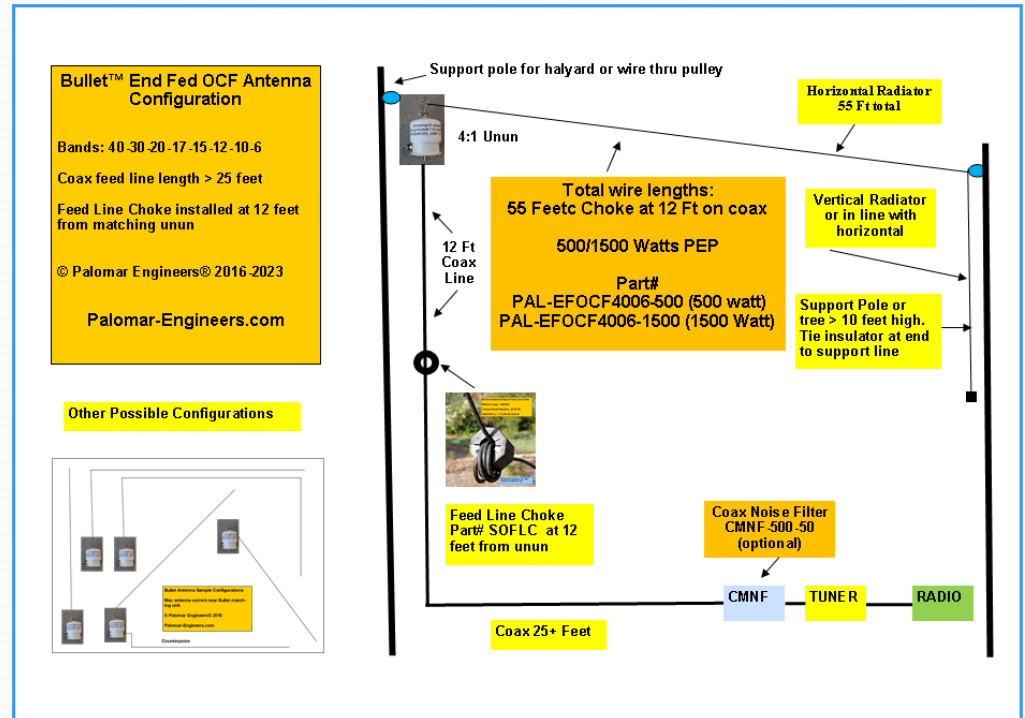

Palomar Resonant End Fed Long Wire Antenna

• Pros

- Wire length < 1/2 wave
- 40-30-20-17-15-12-10-6
- Stealth for HOA
- Ultra broadband 4:1 unun
- Total antenna is 55+12 = 67', but with lower SWR like OCF
- Safe & simple low voltage matching

• Cons

- Coax acts as counterpoise and radiates (OCF)
- Some bands may require antenna tuner in radio

PART#: BULLET-4006-100/500/1500

BULLET-4006 SWR

Bullet-4006 SWR 40-6M

55' Wire = 8 Bands

Resonant EFLW vs Non-Resonant Bullet-71

Bullet-4006 vs Bullet-71 SWR

55 feet Bullet 4006 has better SWR 40-6 meters, but no 80, 60 All Compared

Antenna:	EFHW-40	NREFLW	EFOCF-4006	OCF-4010
Wire Length	66	71	55	66
Counterpoise (ft)	16	42	12	--

60M (tuner)		✓		
40M	✓	✓	✓	✓
30M		✓	✓	✓
20M	✓	✓	✓	✓
17M		✓	✓	✓
15M	✓	✓	✓	✓
12M		✓	✓	✓
10M	✓	✓	✓	✓
6M		✓	✓	✓
Min Coax	25	50	25	25
Unun Ratio	49:1	9:1	4:1	4:1+1:1
Other	Hi voltage feed point	Low volts, coax radiates, tuner	Low volts, coax radiates	Low volts, no coax radiation

End Fed Antenna Choices Recap

- End Fed **Half Wave** – $\frac{1}{2}$ wavelength at lowest frequency, harmonics only, requires high Z (49:1) limited bandwidth matching unit, **high voltage** at feed point NO WARC bands or 6 meter coverage
- **Non-Resonant** End Fed $< \frac{1}{2}$ wavelength at lowest frequency, uses simple matching (9:1), low voltage feed point, works all bands including WARC, coax radiates for additional band coverage, tuner needed some bands
- **Resonant** End Fed OCF (EFOCF) $< \frac{1}{2}$ wavelength at lowest frequency, uses even simpler 4:1 wide band matching, lower voltage feed point, works all bands including WARC, 6M, excellent SWR similar to full OCF antenna but shorter

Most Convenient End Fed is the Resonant End Fed OCF (EFOCF) Antenna followed by the Non-Resonant Long Wire

Question: So how do you set up end fed long wire antennas?

Secrets of End Fed Antennas

How to determine the wire length to use
(antenna, coax and counterpoise lengths)

How to match the antenna to coax cable
(matching unit values and placement)

Choosing a configuration that fits the location
(vertical, sloper, inverted L, horizontal options, zig-zag)

▪ **Choosing a feed line choke or noise filter**
▪ (selection and installation)

How do these steps apply to your end fed use & location?

How long?

Non-Resonant end fed antenna wire length options

- Antenna Wire – longer for better low band operation
- Coax Cable – used as counterpoise – place choke at suggested lengths from matching unit (RG-8X ok to 1000 watts)

Suggested non-resonant wire lengths for 1.8-31 MHz operation (measured from Bullet antenna wire terminal):

Bands Covered (meters)	Wire Length (feet)	Counterpoise Coax Length (feet)	Part#
80-40-30-20-17-15-12-10-6	71	42	BAS-71
160-80-40-30-20-17-15-12-10	155	95	BAS-155

Available at HRO and direct

Resonant EFOCF

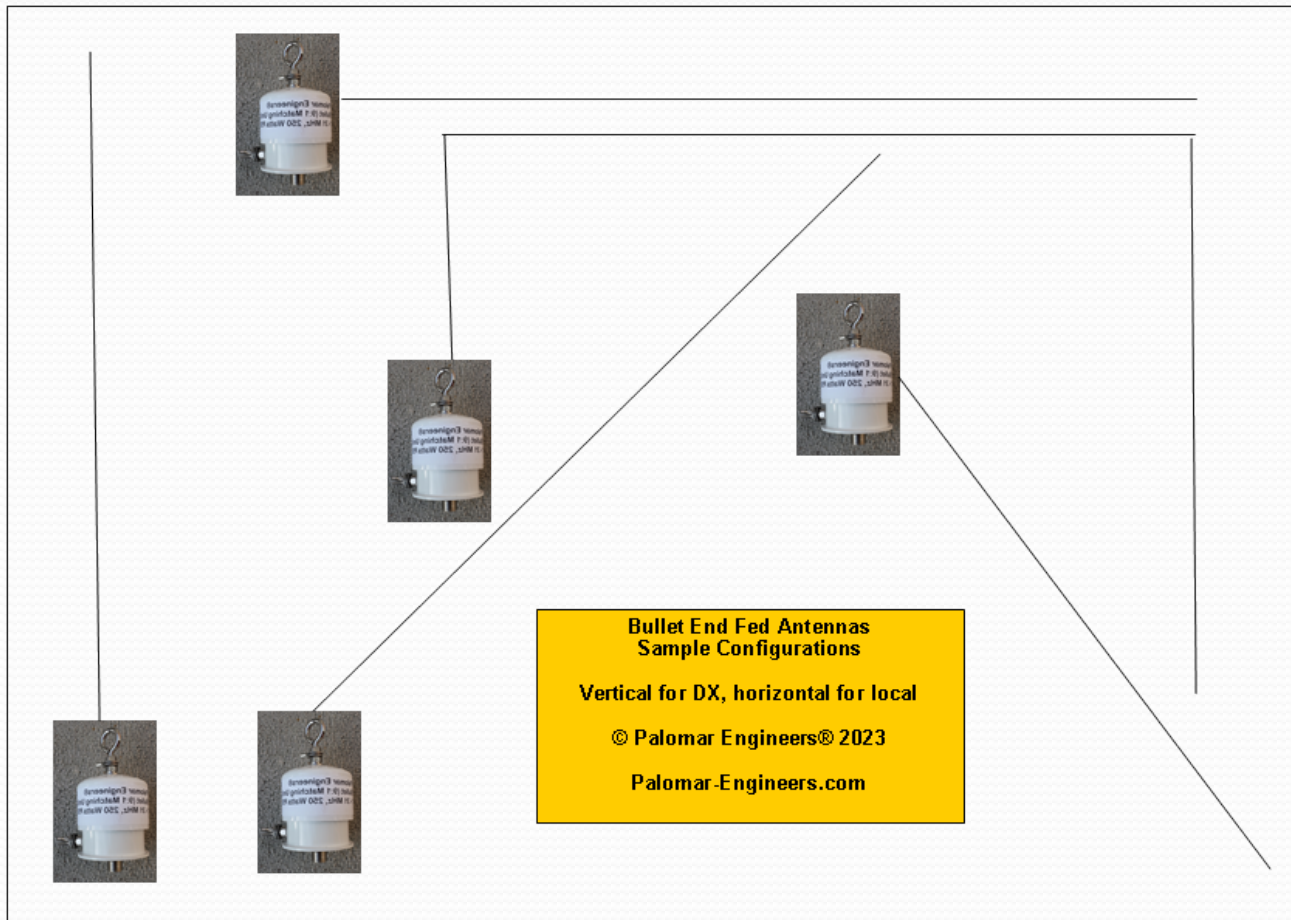

Resonant end fed (EFOCF) antenna wire length options

- Antenna Wire – choose for bands desired
- Coax Cable – used as counterpoise – place choke at suggested lengths from matching unit (RG-8X ok to 1000 watts)

**Suggested non-resonant wire lengths for 1.8-54 MHz operation
(measured from Bullet antenna wire terminal):**

Bands Covered (meters)	Wire Length (feet)	Counterpoise Coax Length (feet)	Part#
20-17-15-12-10-6	25	7	BULLET-2006
40-30-20-17-15-12-10-6	55	12	BULLET-4006
80-60-40-30-20-17-15- 12-10-6	95	40	BULLET-8006

End Fed Configurations

NOTES:

Slope up or down,
Inverted L or N, Zigzag, all horizontal or vertical ok, 90 bend OK, NO coax under antenna, coax radiates so keep high, wind in loop if necessary

Keep antenna (wire & coax to choke) as high as possible

SWR Factors

End Fed SWR Factors

- Configuration shape (Inverted L, flat top, sloper, zig-zag)
- Feed line choke/noise filter placement – at radio end
- Top feed or bottom feed – feed sloper at top end
- Soil Conductivity – install over/near water
- Keep at least 3 feet from metal objects (mast, gutter)

Matching coax to antenna →

Matching the end fed antenna to coax cable

- UNUNs are your friend
 - NREFLW Antenna feed point impedance: 300-900 Ω
 - 9:1 unun = 33 to 100 Ω at coax (SWR < 2:1)
 - EFOCF impedance is 100-400 Ω
 - 4:1 unun = 25-100 Ω at coax (SWR < 2:1)
- Connections for coax, antenna feed point and counterpoise (NREFLW only)
- Power Ratings – PEP to match your station (note Palomar PEP ratings range from 25% to 50% duty cycle depending upon mode)

Unun examples

4:1/9:1 Ununs-100/500/1500/5000

Bullet-9U-500 -500 Watts PEP

Super Bullet-9U-1500 - 1500 Watts PEP

Cube Unun - 9:1, 1.5/5KW Watts PEP

Bullet-9U-100 -100 Watts PEP/FT8

Bullet 4:1 Unun—100 Watts PEP/Digital Part# Bullet-4U-100

Palomar-Engineers.com

These PEP values are accurate when used into a properly matched load

Feedline Choke Needed

Choosing an End Fed Coax Choke

Ring – 8-10 turns
Higher Impedance - \$10

Criteria to Consider

- Adequate Choking Impedance (Z) > 500 Ω
- Effective Frequency Range where $Z > 500 \Omega$
- Sufficient Power Rating (PEP, Digital)
- Physical Size/Weight

Snap on – 5-6 turns RG-8X or 3 turns
LMR-400 size coax – use 2 chokes
Easier to position - \$20/ea

Part# SOFLC

What about antenna noise issues?

Radio System Installation

NOTES:

If coax > 50 Ft or runs close to noise sources, consider a coax noise filter to reduce common mode noise received on coax braid.

Do a simple test.....

Receive RFI Solution

Install Coax Noise Filter to Suppress Receive RFI

Less common mode noise (RFI) = More DX!

How to select and install filters for maximum effect

Quick Test
for Common
Mode RFI

Coax Center Conductor Only—measure noise level

Coax Center Conductor and outer shield — measure noise level. If higher, then you have common mode noise

Power Options

Choose choke with CMRR > 20 dB over frequency range used

CMRR = Common Mode Rejection Ratio

Coax Noise Filter (CMNF-500-50)
1-65 MHz, 500 Watts PEP, Up to 38 dB reduction (6 “S” units of common mode noise gone!

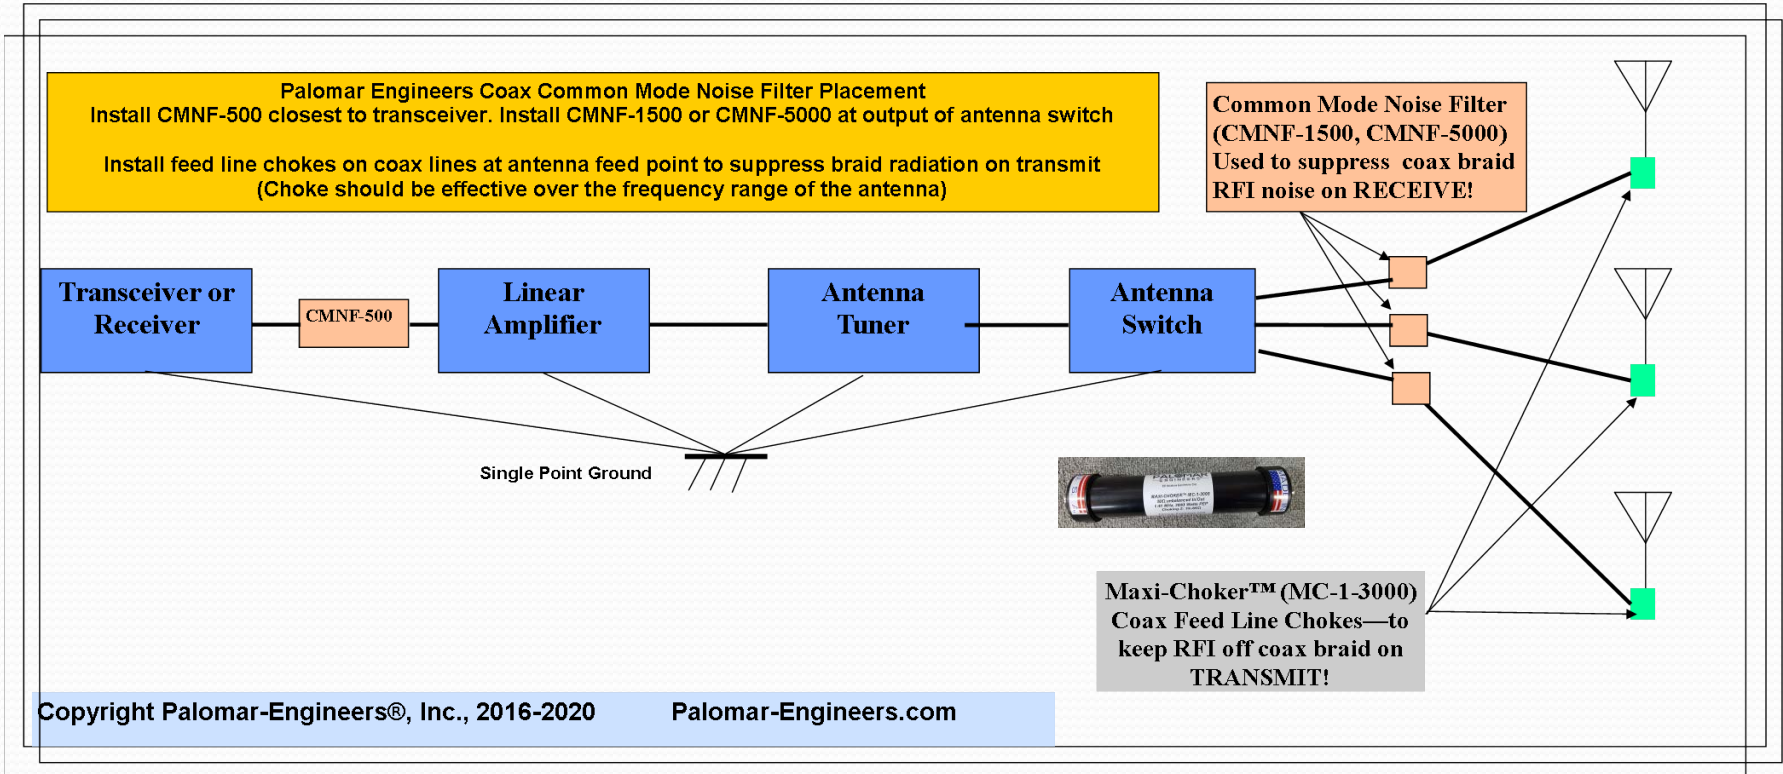

MC-1-500,
MC-1-1500
MC-1-3000
MC-1-5000

Maxi-Choker (part# MC-1-3000 – 3KW PEP)
1-61 MHz, 3KW PEP, 2 pound. All coax lines, Optional ground, static bleeder, up to 49 dB suppression!

1 “S” unit = 6 dB, 36 dB = 6 “S” units

DO NOT BUY CHOKES with NO SPECS!

Coax Noise Filter Installation

Where to Install

- Choke at antenna for TRANSMIT RFI
- Noise Filter at Antenna Switch for RECEIVE RFI
- Between Transceiver and Amplifier
- Single point ground system

Antenna Switch Solution

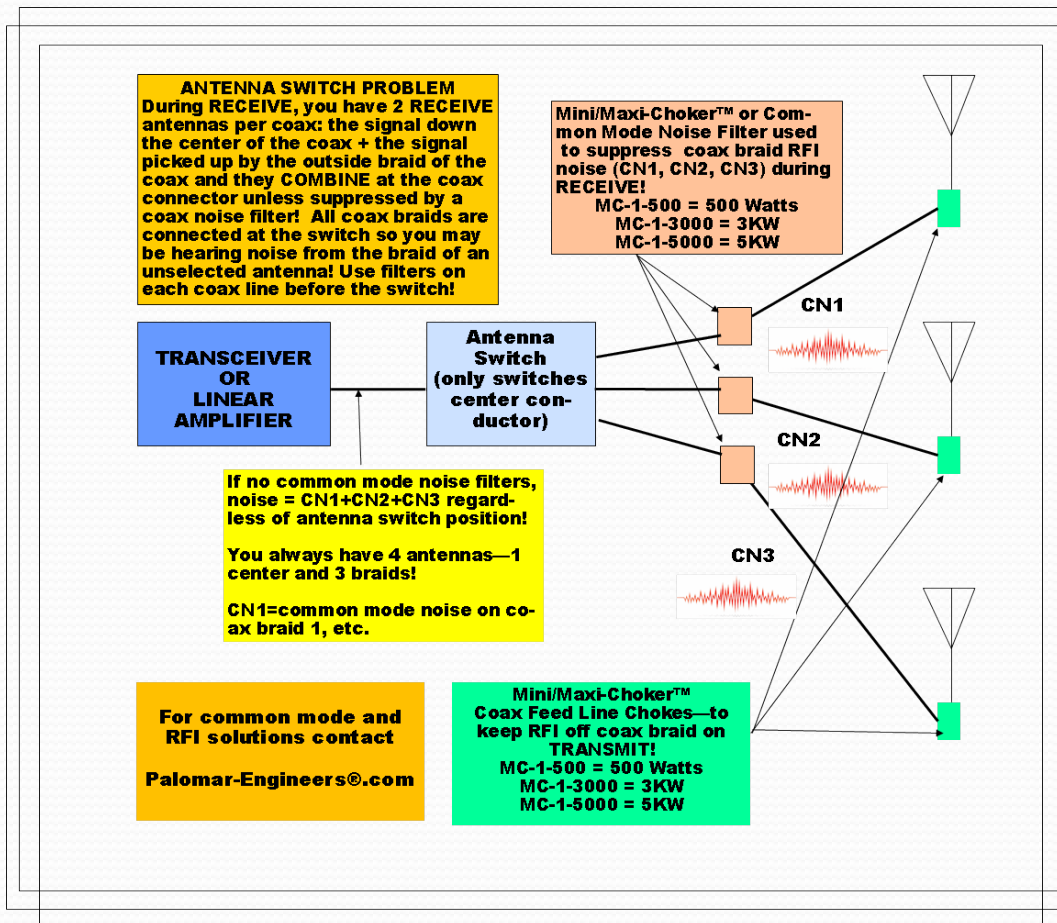

Antenna Switch Solution

500 watt Mini-Chokers

Coax Braid Isolators

Solving RFI Problems

Stop Transmit RFI to Electronic Devices
Reduce Receiver RFI noise

Typical RFI Solutions

- Keep antenna (and coax) away from house wiring including AC power, Cable/Satellite feeds, telephone lines as these wires can act as receive “antennas” and overload attached electronics OR these “antennas” can transmit spurious signals (and noise) to your antenna and coax giving a high noise floor.
- Use Palomar RFI kits to solve RFI interference or noise issues in your own home or neighbor’s. See website for specific electronic device details.

Transceiver/Amp RFI Kits

Palomar RFI kits for all brands of transceivers and amplifiers

Transceiver RFI Kit

Linear Amplifier RFI Kit

RULE # 1: Clean up your transmitter & amp RFI first!

Household/Neighbor's RFI

Neighborhood RFI Solutions

MY HOME or NEIGHBOR'S HOME

ALARM SYSTEM RFI

HOME THEATER RFI

COMPUTER RFI

MISCELLANEOUS RFI

GARAGE DOOR

TELEPHONE/DSL RFI

Recommendation: Use RFI kits for specific problems, have neighbor purchase and install – DO NOT make mods to neighbors equipment! MOST problems are RFI picked up by AC power/phone lines so ferrite filters work well.

Receive RFI Solution

Transmit RFI Solution

Use Ferrite Combo RFI Kits for Newbies

Ferrite Combo Kits for Troubleshooting Multiple RFI Issues include multiple ferrite shapes and sizes

or

$\frac{1}{2}$ " ID snap-ons and 1.4" ID rings are the most popular sizes and can be used to solve most ham radio HF RFI problems

Test Time

Question #1

- What characteristics of a non-resonant end fed antenna make it superior to a half wave end fed antenna?
 - A) Non-resonant will work on even and odd harmonic frequencies
 - B) Half wave has complicated matching unit with high voltage, non-resonant has simple matching and lower feed point voltage
 - C) Non-resonant can work the WARC bands
 - D) Non-resonant antennas radiate as well as resonant antennas
 - E) All of the above
 - F) None of the above
 - G) I have no idea - I was asleep during the talk

Question #2

Where do you place the feed line choke on a non-resonant end fed antenna?

- A) right below the matching unit to choke off all coax shield radiation
- B) at the radio end of the coax - about 30% of coax + antenna wire length
- C) in the middle of the coax length to balance the radiation
- D) between the antenna tuner and the transceiver
- E) end fed antennas don't need feed line chokes

Question #3

TOP SECRET

- What is one of the best kept secrets in ham radio?
 - a) Ladder line has more loss than coax
 - b) An antenna has to be resonant in the ham bands to radiate in the ham bands
 - c) All end fed antennas work on all frequencies, so buy the cheapest
 - d) Coax noise filters reduce common mode noise level in your receiver so you can hear more stations
 - e) All extra class hams go to heaven

OK, 1 more!

Bonus Prize Question #4

- Which company is your best source for End Fed Antennas and RFI solutions?

RFI Solutions Experts

RFI Solutions from KHz to GHz
